You need to take extra care about lex meta characters while writing regexes. The set of meta-characters and their use are listed below for your reference.

Meta symbol	**Intended purpose**	**Meta symbol**	**Intended purpose**	**Meta symbol**	**Intended purpose**
"	To enclose a string	–	Range - a continuous range of ascii symbols	()	Group regexes together
\	Escape character	^	Negation when inside a character class 1st symbol in regex indicates beginning of line	+	Positive closure; ≥ 1 occurrences of a pattern
[]	Character class – match a single character in braces	$	To match at the end of a line	?	0 or 1 occurrence of a pattern
|	Combine 2 or more regexes as alternates	*	Kleene closure; ≥ 0 occurrences of a pattern	{}	Repeat a regex given number of times macro for auxiliary regex definition
/	Lookahead operator beyond scope of this course	%	Used at beginning of lines, such as %option, %{, %}, and %%
